If used in solution, or mixed with other substances, and under conditions which differ from EN 374, contact the supplier of the CE approved gloves. This recommendation is advisory only and must be evaluated by an industrial hygienist and safety officer familiar with the specific situation of anticipated use by our customers. It should not be construed as offering an approval for any specific use scenario.

##### Body Protection

impervious clothing, The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

##### Respiratory protection

Where risk assessment shows air-purifying respirators are appropriate use a full-face particle respirator type N100 (US) or type P3 (EN 143) respirator cartridges as a backup to engineering controls. If the respirator is the

sole means of protection, use a full-face supplied air respirator. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

**Control of environmental exposure**

Prevent further leakage or spillage if safe to do so. Do not let product enter drains.

#### Carcinogenicity

IARC: 3 - Group 3: Not classifiable as to its carcinogenicity to humans (Cimetidine)

ACGIH: No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by ACGIH.

NTP: No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.

OSHA: No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by OSHA.

#### Reproductive toxicity

Presumed human reproductive toxicant

Reproductive toxicity - mouse - Intraperitoneal  
Effects on Newborn: Biochemical and metabolic.

Reproductive toxicity - rat - Oral  
Effects on Fertility: Post-implantation mortality (e.g., dead and/or resorbed implants per total number of implants).

Reproductive toxicity - dog - Intravenous  
Paternal Effects: Prostate, seminal vesicle, Cowper's gland, accessory glands.

Reproductive toxicity - rat - Oral  
Paternal Effects: Prostate, seminal vesicle, Cowper's gland, accessory glands.

May cause reproductive disorders. In some rat studies Cimetidine has shown a delay in development of the prostate and seminal vesicles and an impairment of sexual maturation in male offspring exposed antenatally to this drug some concern exists that prolonged fetal exposure to this agent may inhibit normal masculinization in a male fetus. In rat experiments, large doses administered over a period of six months reduced the size of the testes, prostate gland, and seminal vesicles. Cimetidine has been clearly associated with antiandrogenic effects in adult humans. These effects include the occasional development of gynecomastia and a decline in sperm count (without loss of fertility) among men treated with this drug.
